

Competent cooperation

DEVELOPING A GEN-SET CONTROLLER "AGC-200"

Deif is a medium sized producer of controller units for decentralized power production, wind-mills and ships.

CASE

"For 4 years we have used displays delivered by M-Comp in some of our products and we have had a very positive cooperation."

"M-Comp has the perfect size – we always experience a very fast response time as well as professional service, both when it comes to logistics, deliveries and technical quality.

As a distributor of products from a number of reliable and qualified manufacturers M-Comp fits our needs perfectly.

Lately we have been in close dialogue with M-Comp in order to develop a display for a new project (a new gen-set controller called AGC-200).

As usual the challenge has been to balance the demands for price and performance. We focused especially on the contrast and the temperature area of the display. Both were handled to our complete satisfaction – not least with help from M-Comp. We expect to begin the production soon."
