REMOTE CONTROL OUTSOURCED TO SOUTH KOREA

North Invent develops and produces TFT panels for use in the maritime sector, solutions with very high demands for various approvals as well as production and testing processes.

CASE

"Before M-Comp was given the task of sourcing a remote control to one of our maritime monitor product lines, we had a lot of resourced tied up in purchasing components, controlling inventory and testing these remote controls.

The process with M-Comp was extremely fast and very professional. We provided drawings of the components as well as the finished product and within just 2 weeks we received the first prototype for testing. After a few changes and adjustments and one more week we had the finished product in our hands.

Today M-Comp provides a finished product in a quantity which fits our needs at a lower price than when we purchased the components ourselves. We actually reached a saving of 20% on the finished product to that we can add an annual saving of 500 man hours, savings on inventory og both components and the finished product as well s an improved liquidity because we can now purchase the remote control in accordance with our needs."

"We are very happy with the cooperation with M-Comp and will not hesitate to let M-Comp do other, similar jobs for us in the future."
